

Measuring Your Shock

To insure a perfect fit for your new *DirtSkins* shock cover we will need two measurements. The **circumference** of your shock and the **length** of the lower half of your dual coil shock.

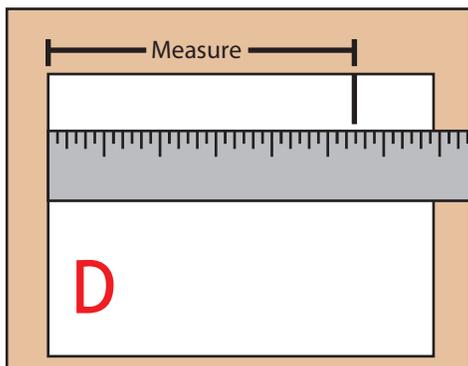

A) Take one sheet of paper

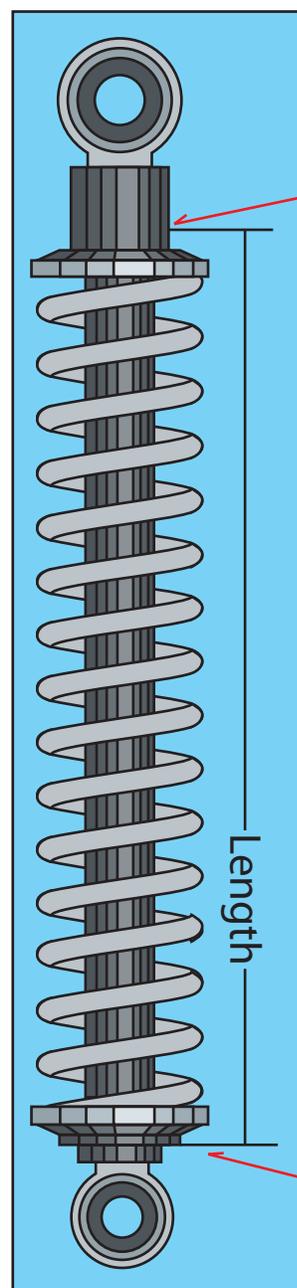

B) Wrap it around your shock.

C) With a pen or pencil, mark where the sheet ends.

D) Measure from the end to your mark.

This is your circumference.

For the length measure from a quarter inch past the top of the upper coil bracket ...

...to the bottom of the lower coil bracket.

This is your length.
